

SPEED UP THE DEVELOPMENT OF YOUR LUBRICANTS & ADDITIVES

DSI offers equipment and test services to accelerate the development of lubricants

Our expertise covers the following topics:

- Impact of formulations on wear and aeration
- Impact of alternative fuels on lubricant aging
- Test of lubricants in real operating conditions
- Solutions for real-time measurement of lubricant degradation: presence of wear debris, change of viscosity, presence of water or coolant, etc.

DSI also develops turn-key solutions for lubricant testing, from fluid conditioning systems to complex test rigs where real operating conditions are simulated.
